

PackBotEOD
Upgrade kit for X-ray operation
Art.-No.: 160268-145
NSN: 6635-12-381-2508

In reality, after the PackBotEOD System has been purchased and is in operation the user recognizes that the X-ray capability is missing. Therefore we created this upgrade kit which includes everything to allow x-ray operations via the PackBotEOD vehicle.

Not included are holders/adapters for the imaging system Image plate or flat panel systems. In most cases we can even help with these, please contact us.

The radio remote trigger device consists of two items. The receiver and the transmitter have to be individually married to each other. The receiver will be installed into the handle of the XR200 or XRS-3. (Separate receiver for the XR 150 is available on request).

The kit consists of:

Description	Qty	Art.-No.:
Tool bar	1	160268-054
Radio remote trigger device with key and 2 AA batteries	1	150192-501
XR200/XRS 3 mount complete with lock pins and holding line	1	160268-121
Soft gripper fingers	1 set	160268-130
Adjustable gripper fingers with screws	1 set	160268-044
Carrying and storage case	1	160268-145-10
Label with SN of trigger device on generator	1	
Label for generator carrying case with SN of trigger device	1	
Instructions	1	

Mounting the toolbar between the flippers needs two locking pins. In order to have these in the correct position two bores have to be drilled into the flipper side. We recommend that these holes are to be drilled in our workshop as well as the installation of the receiver of the trigger device in the handle of the GOLDEN generator.
