

Manual Door Ram

Art.- No.: 170288

ALLEN  VANGUARD™

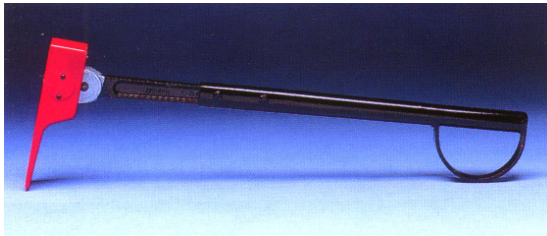

A simple and effective door ram for rapid forced entry of inward opening doors.

The 16 kg ram is swung with maximum manual force against the lock area of the door to impart a weigh load of impact of approximately 3 tons. Opens all but steel reinforced doors. Fitted with protected handgrips. Ca. 580 mm long

Door Ripper

Art.- No.: 170289

ALLEN  VANGUARD™

A simple lightweight tool for forcing outward opening doors.

To effect entry the blade is driven between the door and frame close to the lock mechanism with the aid of a club hammer or the manual door ram (170288). Pulling back hard on the handle will force the door open, normally, at first attempt. Resistance if any, is usually overcome by using the ratchet mechanism in the handle, which allows the blade to be worked behind the door to improve the effectiveness of the applied force.
